A Cash Out value is calculated using amount staked, price at the time the bet was placed and current price at the time of the Cash Out. While you may have most selections winning, if one or more selections are considerably longer odds than taken to win, it will have a large impact on your cash out value.

Bettors will usually choose to cash out early from a wager for two reasons. A bettor can take partial winnings if a wager looks good early but doesn't seem as though it will end with a win. Similarly, a bettor can cash out early on a losing ticket so they don't lose the entire amount of the wager.
