The probability of a ball landing in bucket k is the number of paths to the bucket multiplied by the probability of each path: $p(k) = \sum_{j=0}^k \binom{N-1}{j} \left(\frac{1}{2}\right)^{N-1}$

Page 5 Clicker Question #1 For a 7-row plinko, with 8 buckets labeled 0 to 7, what is the probability of a ball landing in bucket 1?

The Mathematics of the Board At each level, the penny will be knocked either to the left or to the right, each with a 50/50 probability. $p(\text{left})^{n_1} p(\text{right})^{n_2}$. But there will be many ways of taking n_1 lefts and n_2 rights over N levels. If all N choices are left, for instance, there is only one way.

pe could have signed for Chelsea in 2012 after undergoing a trial with the London club. However, after being asked to return for a second training session, the player refused and they didn't return to England automatically which means Chelsea, Real Madrid, Man City have already booked their spaces for the tournament which
