Wheel Decide is a free online spinner tool that allows you to create your own digital spinner for decision making, prize wheel, etc. The algorithm works by constructing a table of characters and their frequency, based on the input. Initially, the table contains only the characters 'a-z' and '0-9'. As the user enters characters, the algorithm updates the table to reflect the frequency of each character. For example, if the user enters 'a', the frequency of 'a' increases. The algorithm then generates a random number between 0 and the total number of characters in the table, and returns the character corresponding to that number. This process repeats until the user has entered the desired number of characters. The final result is a string of characters, where the length of the string is equal to the number of characters entered. This is a simple implementation of a random number generator, and can be used for a variety of purposes, such as generating random passwords or creating a random selection process.
